## Multiple Law Enforcement Agencies
United States

To protect and serve, law agencies utilize LibertyNET

Variety of departments benefit from information system

California City

This City wanted a document management system that was sufficiently robust and flexible for implementation across several departments. The selection committee unanimously chose LibertyNET, and commenced with an installation in the City Clerk's department. LibertyNET has subsequently been rolled out in the HR, MIS, and Police Departments.

The city's Police Department tied its LibertyNET application into the Tiburon on-line dispatch system. This allows users to immediately pull up all documents associated with any given incident number.

New York DA's Office

This New York District Attorney's office installed LibertyNET in 1994 to track and process the many documents used to process criminal cases. The LibertyNET solution is used to capture and distribute documents to investigators via LibertyNET's TaskFlo functionality.

Recent upgrades, including the purchase of additional scanners and CD mastering unit, will allow case files to be conveniently provided to the investigators on searchable CDs.

County Sheriff's Dept.
Kansas

County Sheriff

This County Sheriff's Department has implemented a web-based LibertyNET system that encompasses imaging, workflow and large-scale jukebox storage. Specifically, the following departments use LibertyNET:

Records Management Department: The LibertyNET system replaced an outdated microfiche system for the storage of case files and arrest jackets. These imaged documents are accessed and viewed via Liberty's web module. Users include City Police Departments and various outside agencies who can conduct a search on these imaged documents using only standard Internet browser software. All access rights and system security is maintained through requirements set by the County Sheriff's Department.

The County Crime Lab: LibertyNET's Image Management feature is used to capture case files, evidence reports and lab analysis reports for departmental processing and additional record keeping requirements.

The Adult Detention Center: LibertyNET's Image Management module is used to scan in medical history, property reports and daily inmate activity charts for departmental use and processing.
